CAREER SUMMARY

- Self-directed, detail-oriented, and professional programmer with more than 2 years of experience in desktop-based and web application design, analysis and development.
- Proficient in object-oriented programming such as C# and Python as well as experience with MS SQL Server, ASP.NET, MVC, and WPF.
- Ability to analyze and understand complex problems and generate appropriate solutions.
- Capable of learning new programming languages, technologies, and concepts quickly.

WORK EXPERIENCE

Eagle Creek Software Services   **February 2017 – Present**
Application Development Consultant   Valley City, ND

- Designing and implementing new features and functionality for desktop-based software and web applications as well as identifying and debugging defects in application code.
- Evaluating impacts of programming changes or modifications on whole system to ensure codes were implemented properly and would not affect existing functionality.
- Developed reliable, reusable, and maintainable software code using C#, SQL, and other technologies to meet design specifications and user requirements within specified deadlines.
- Contributed to overall project functionality and maintainability through developer testing and creating unit test cases for new code changes as well as updating outdated test cases.
- Assisting in design and code reviews for new functionality and code changes by other consultants as well as presenting completed features and functionality to clients.

Wooami E-Commerce   **September 2016 – December 2016**
Data Analyst   Westminster, CA

- Assisted sales team in updating product listings on e-commerce sites using web technologies including HTML, CSS, and JavaScript to promote page visitation and increase online traffic.
- Assisted in analyzing and evaluating customer purchases and most viewed online items to identify popular products and promoting customer retention through discounts and sales.
